TEAM 4 | STUDENT BUDGET TRACKER

Web Programming Group Project Proposal

A simple money-management tool for university students

Track income and expenses, stay within a monthly budget, and understand spending habits in one clear dashboard.

TEAM MEMBERS & GITHUB

Neupane Sushant	202537254	@sushant0101n-gif
Silwal Saiman	202537200	@saimansilwal7-oss
Khanal Aswin	202537244	@aswin-wq
Pandey Aayush	202537201	@202537201-pandeyaayush
Subedi Binaya	202539453	@bineyho

Team roles: dashboard structure — Sushant | CSS/responsive layout — Saiman | transactions/validation — Aswin | budget/chart/search — Aayush | storage/integration/testing — Binaya

PROJECT CONCEPT

What problem are we solving, and for whom?

The problem

Students often lose track of small daily expenses and may not know how much money remains for the month.

Our solution

A browser-based budget tracker that records transactions and presents income, expenses, balance, and budget progress.

Target users

University students, including those living away from home or managing part-time income and living costs.

Project goals

- Make daily spending easy to record.
- Help users notice spending patterns and avoid exceeding a monthly budget.
- Keep the interface simple and responsive on desktop or mobile.

FEATURES & SCOPE

Build a reliable minimum viable product first

Dashboard summary

MVP

Show total income, expenses, balance, and monthly budget progress.

Transaction manager

MVP

Add, view, search, filter, and delete income or expense records.

Categories & chart

MVP

Group spending by category and display a simple chart.

Browser saving

MVP

Use localStorage so records remain after refreshing the page.

Currency converter

BONUS

Use Frankfurter API to check exchange rates for supported currencies.

MVP = required for the first working version. BONUS = added if time allows.

TECHNOLOGY STACK

Plain HTML, CSS and JavaScript; no frontend framework

HTML

Page structure, forms, transaction list, and dashboard sections.

CSS

Responsive layout, cards, colors, spacing, and mobile-friendly screens.

JavaScript

Calculations, validation, search/filter, chart data, and API requests.

Browser storage

localStorage saves transaction and budget data in the current browser.

External API — Bonus

Frankfurter Currency Exchange API
Base URL: https://api.frankfurter.dev/v2
Documentation: https://frankfurter.dev/

Chart option: use a lightweight JavaScript chart library such as Chart.js if needed. Core functionality will remain plain HTML, CSS, and JavaScript.

UI WIREFRAMES

Early layout sketches — final visual design may change

A. Dashboard / Home

Student Budget Tracker

Monthly Overview

Income	Expenses	Balance
₩1,200,000	₩430,000	₩770,000

Budget progress

Recent transactions · category chart

B. Transactions / Add expense

Transactions

Add transaction

Type: Income / Expense

Description

Amount (KRW)

Category

Date

Save transaction

Wireframes show structure and key controls, not final colors or exact spacing.

DEVELOPMENT TIMELINE

Planned work across Weeks 10–14

WEEK 10	**Nov 3–9**	Design UI, confirm API, create repository, and build the basic page structure.
WEEK 11	**Nov 10–16**	Implement transaction form, calculations, budget tracking, and core dashboard.
WEEK 12	**Nov 17–23**	Complete MVP, add category chart and storage, then polish responsive UI.
WEEK 13	**Nov 24–30**	Test features, fix bugs, review accessibility, and prepare presentation/video.
WEEK 14	**Dec 1–7**	Present the project, demonstrate the working application, and answer questions.

Plan weekly check-ins so each part is integrated and tested before the final demo.

GITHUB, DEPLOYMENT & DELIVERABLES

One public landing page for the proposal and working application

Repository structure

index.html · style.css · app.js
README.md · .gitignore
proposal/index.html
proposal/proposal_Team4.pdf

GitHub Pages

Publish the app from the repository and deploy the proposal landing page so the professor can view materials online.

Proposal landing page

Embed the PDF and 2–3 minute video, link to the app and repository, and include team GitHub profiles.

Final submission checklist

PDF proposal · narrated video · source code · deployed pages · README with setup and usage instructions.

Repository URL: https://github.com/sushant0101n-gif/team-4-project

Video: 2–3 minutes (maximum 3:30), with narration covering team, concept, features/stack, wireframes, and timeline.
